

Q1:What problem does Salesforce solve?

Ans: Salesforce solve the problem of customer relationship management and inefficiency in customer data.

Salesforce works on a cloud based software that gives companies a complete view of their customers so they can build a deeper relationship with customers.

Sales force also helps the different teams(sales , services , IT , marketing , commerce) to work on shared customer data.

It provides a single shared view of the customer data to all the different teams.

Companies or Organisations often use spreadsheets and different files to store the customer data which is inefficient and not suitable for teams to work on customer data , salesforce solves this problem.

Problems solved by salesforce:

1-customer data management

2-sales tracking

3-team collaboration

4-Automation

Q2: What is CRM?

Ans:CRM means Customer Relationship Management. Salesforce provides a CRM platform used by businesses to manage interactions with customers and improve relationships with them.

Customer 360 is an AI-powered CRM platform that creates a single, shared view of a customer by integrating data across sales, service, marketing, commerce, and IT teams in an organisations.
